EDUCATION & CERTIFICATIONS

B.Tech, Information Technology — Bharati Vidyapeeth's College of Engineering, New Delhi 2025 – 2029 / CGPA: 9.0

Generative AI & Agentic AI — IBM / Coursera

May 2026

- End-to-end deployment of context-aware Generative AI systems using RAG architectures to ground LLMs with external data sources and domain-specific knowledge bases.
- Mastered LangChain for intelligent prompt orchestration, vector stores, memory management, and production-ready agentic AI application design with tool-use and multi-step reasoning.

Skills: Python · RAG · LangChain · PyTorch · HuggingFace Transformers [View Cert](#)

TECHNICAL SKILLS

AI/ML: OpenAI API, Gemini API, HuggingFace Transformers, PyTorch, RAG Pipelines, OCR

Languages: Python, JavaScript (ES6+), TypeScript, Java, HTML5, CSS3, SQL, C

Frameworks: React.js, FastAPI, Tailwind CSS, LangChain, LangGraph

Databases: MySQL, PostgreSQL, Firebase, Supabase, MongoDB, Redis

Tools: Git, GitHub, Postman, Vercel AI SDK, Aceternity UI, Prompt Engineering

PROJECTS

Sentinel AI | AI Runtime Security Platform — TypeScript · JS · Python · RAG · LangGraph · LangChain · Redis · FastAPI

[GitHub](#) [Live Demo](#)

- Architected and open-sourced a runtime AI security middleware (FastAPI, LangGraph) to intercept, score, and neutralize prompt injections and data exfiltration in real time.
- Engineered a RAG Shield pipeline that preemptively sanitizes document streams before vector database ingestion, preventing semantic data poisoning.
- Packaged the threat-detection infrastructure for local, client-side execution, enabling zero-trust edge-level LLM security without exposing telemetry to third-party clouds.

EveryRupee | WealthTech & Portfolio Analytics — React.js · Python · PyTorch · JS · HTML · CSS

[GitHub](#) [Live Demo](#)

- Engineered an AI-driven personal finance platform featuring dedicated Tax and Investment modules, powered by LangChain and a custom RAG pipeline to deliver context-aware financial guidance.
- Integrated intelligent document processing and conversational AI, allowing users to upload complex tax PDFs and investment reports for real-time, highly accurate analysis via a domain-specific chatbot.

VertasEdge | AI Proctoring System — React.js, TypeScript, Vite, MediaPipe, OGL

[GitHub](#) [Live Demo](#)

- Architected a zero-backend, edge-AI proctoring suite (React, TypeScript) using Google MediaPipe via WebAssembly for fully client-side inference, ensuring privacy and eliminating server costs.
- Engineered real-time monitoring with multi-face detection and gaze tracking (EMA filter) to instantly flag suspicious activity without affecting UI performance.

LEADERSHIP & OPEN SOURCE CONTRIBUTIONS

- **Open Source Contributor, GSSoC & SSoC '26:** Engineered autonomous AI agent systems and scaled production-grade, community-driven repositories across a global multi-repository network via high-impact pull requests.
- **Technical Representative, GDSC BVCOE:** Served as core website developer, delivering a high-performance, accessible, and fully responsive frontend used by 1,000+ students across the chapter.
- **Content & Documentation Lead, TEDxBVCOE:** Directed technical content strategy and coordinated cohesive digital storytelling across all event platforms.
- **Hackathon Competitor:** Competed in 15+ national and corporate hackathons, including Smart India Hackathon, IIT Delhi, DTU, NSUT, NIT Delhi, EY Techathon, AMD Slingshot, Apart Research, SAFL, and Microsoft.
